

ALU spray

Wound care preparation

Composition: Aluminum 2.4 g, excipients up to 100 g.

Action: The micronized aluminum has protective, and antibacterial effect on wounds. It also increases the contraction of the edges of wounds, and accelerates the healing process. Indications: accidental and postoperative injuries.

Application: Cleaned and disinfected wound should be covered a thin layer of aluminum from a distance of about 30 cm. Use 1-2 times a day. During the application protect eyes from the contact with spray. NOTE: Shake well before use. After use, turn the packaging upside down and briefly press the spray head so as not to allow drying up of the substance.

Packaging: 150 ml spray.

Expiry date: 2 years from the date of manufacture.

Storage: Keep at the temperatures of 10°C–25°C, according to the rules for packaging under
