

# KETOSIS

## KETOSIS

## WHEN TO USE THEM?

### ENERGYVIT

- For ketosis prevention
- For daily use to increase energy balance in the feed
- To stimulate liver functions
- To increase appetite

### KETOFIX

- For ketosis prevention and treatment
- For use in perinatal period
- To stimulate liver functions
- To increase appetite

## MAIN ADVANTAGES OF PRODUCTS

### ENERGYVIT

- 2 sources of glucoelastic substances
- Very palatable product
- Prevents heating up the feed

### KETOFIX

- 3 sources of glucoelastic substances
- High niacin content
- Immunity enhancement

## ENERGYVIT: ACTIVE INGREDIENTS

### Glycerin and propylene glycol

- glucoplastic substances - increase the level of glucose in the blood
- help to counteract ketosis and pregnancy toxemia
- increase the energy level in the ration
- improve the palatability of feed

### Niacin

- covers the liver
- improves energy metabolism
- facilitates liver de-fatting

### Selenium

- increases the body's natural immunity
- protects the animal against the poisonous effects of heavy metals
- and other harmful substances

### Vitamins E, D<sub>3</sub>, group B

- stimulate the immunity
- are responsible for proper bone development and mineralization
- improve energy metabolism

## ENERGYVIT: HOW TO USE

Species	Dose	How to use	How often
	COW 300 g	orally	from 2 weeks before up to 6 weeks after calving
 	SHEEP GOAT 75 g	orally	from 2 weeks before up to 6 weeks after parturition

## KETO FIX: ACTIVE INGREDIENTS

### 3 sources of glucoplastic substances:

glycerin / propylene glycol / sodium propionate

- prevent the formation of ketones in the body
- help to maintain the proper level of glucose in the blood
- improve the energy balance
- increase the energy level in the ration
- improve palatability of the feed

### Niacin

- covers the liver
- improves energy metabolism
- facilitates liver de-fatting

### Selenium and vitamin E

- have a positive effect on the immune processes occurring in the animal's body

## KETO FIX: HOW TO USE

Species	Dose	How to use	How often
	COW 500 g	orally	from 2 weeks before up to 6 weeks after calving
 	SHEEP GOAT 150 g	orally	from 2 weeks before up to 6 weeks after parturition
