

MERRI Ket liquid

Complementary feed diet

Composition: 250 ml of the product contains: dietary additives: - compounds of trace elements: magnesium - 76,9 mg, cobalt - 57,9 mg, potassium iodide - 0,52 g; Zootechnical additives - digestibility enhancers: propylene glycol - 253,5 g; Carrier: water; Moisture content: - 4,97 g.

Properties and action: The product allows keeping the proper balance of energy requirements in cows and sheep during the period of the largest milk production. The propylene glycol, which is contained in the product, takes part in gluconeogenesis process in liver by rising glucose level in blood and causes the reduction of ketone compounds concentration. Cobalt and iodine are essential microelements for the proper metabolism function.

Recommendations: The product is used as preventive and adjunctive therapy in the treatment of ketosis which occurred in cows and sheep. The product has to be administered from 3 to 6 weeks after giving birth and during lactation in cows as well as in the last month of pregnancy in sheep.

Dosage: The product is intended for oral administration. It is used as preventive and adjunctive therapy in the treatment of subclinical ketosis: cows - 250 ml of the product daily for 4-7 days, sheep - 60-100 ml of the product daily for 4-7 days.

Storage Conditions: Keep out of reach of children at a temperature of 5° C to 25° C.

Package: 250 ml.
